

NEED FLEXIBLE CATTLE SORTING OPTIONS? NO PROBLEM.

CATTLE SORTING ALLEYS

ARROWQUIP

MODEL: One-Way Sorting Alley 30° [OWSA]

WEIGHT: 457 lbs.

DIMENSIONS: 61" w x 82" h x 54" l

MODEL: One-Way Sorting Alley 90° [NDSA]

WEIGHT: 521 lbs.

DIMENSIONS: 67" w x 82" h x 54" l

MODEL: Two-Way Sorting Alley 30° [TWSA]

WEIGHT: 577 lbs.

DIMENSIONS: 87" w x 82" h x 54" l

With a variety of configurations available, there has never been a simpler way to sort your cattle. The Cattle Sorting Alleys feature spring-loaded doors that allow handlers to sort cattle in multiple direction with minimal disruption to flow. Since separating livestock from one another is a high-pressure situation that cannot be avoided, the Cattle Sorting Alleys have high sheeted sides to eliminate distractions and reduce stress. Whether you're sorting in the alleys or after the chute, Arrowquip's Cattle Sorting Alleys allow you to get the job done safely and efficiently.

Featuring a variety of models that allow you to divert cattle in up to three directions or areas, the possibilities to create a cattle sorting configuration that suits the needs of your operation are endless.

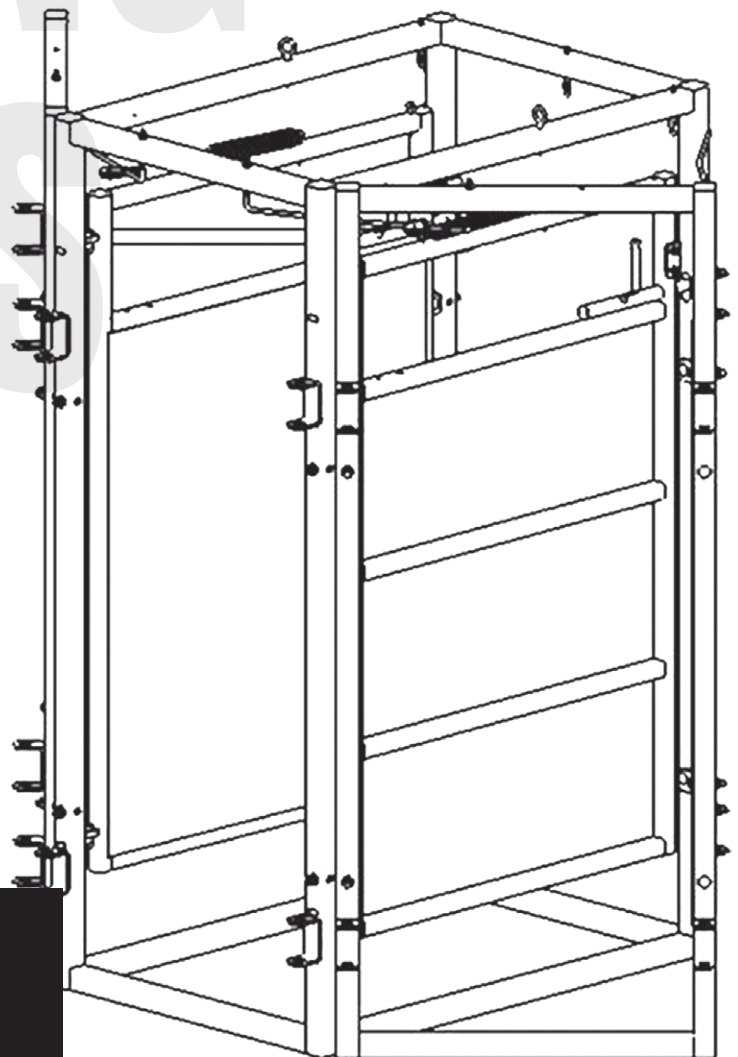

SPECIFICATIONS

- Spring-loaded doors
- Customize to the needs of your handling system with left or right-handed operation
- 4' sheeted sides
- 14-gauge steel sheeting
- Can be used to sort or divert in up to three directions
- Unlimited possibilities to create a cattle sorting configuration that suits the needs of your operation

OUR PROMISE TO YOU

You work hard, day in and day out in the most adverse working conditions. When you put your life on the line every day to feed a world that often seems to be against you, it's time cattle equipment manufacturers step up and make your safety a top priority. With Arrowquip, your safety is guaranteed, or your money back.*

PRE-CHUTE SORTING

Pre-chute sorting is commonly used to send cattle into multiple directions within an alley system. By pairing Arrowquip Cattle Sorting Alleys with Easy Flow Alleys, you can easily create a comprehensive system that leads to different exits such as a chute, loading ramp, or yard. In the event that cattle who do not need to be worked through the chute enter the system, Cattle Sorting Alleys provide an easy way for them to exit the line with minimal disruption to flow.

POST-CHUTE DRAFTING

Did you know there is a safer way to sort a mixed group of cattle? Post-chute drafting provides a safer way to do this essential task, without requiring the handler to be in the pen with rowdy livestock. The flow of livestock is easily managed by running them through an open system and into the post-chute draft to sort in 3 directions or more, allowing one handler to sort large groups of cattle with ease. **LEARN MORE ON THE NEXT PAGE!**

POST-CHUTE

MODEL: Draft Module (Access Gates with Base Sorting Alley)

WEIGHT: 734 lbs.

DIMENSIONS: 65-98" w x 83" h x 95-100" l (Depends on swing arm position.)

POST-CHUTE DRAFT MODULE

Make post-chute cattle sorting easier than ever with the Draft Module. By adding the draft module to your sorting system, you can efficiently sort cattle into designated pens after they have been tagged or treated, while staying safely out of harm's way. A solo rancher can operate the draft module with one hand and control the head gate with the other to regulate flow. With an upgraded design, the Draft Module features side doors that easily adjust to accommodate head gate accessories and provide full access to the animal's head.

SPECIFICATIONS

- 14-gauge steel sheeting
- Bolts onto the Sorting Alley and Cattle Chute for stability
- Side gates open in both directions for easy handler access and passing through
- Slam latches placed at the top to keep floor clear of trip hazards
- Lock stops on latches provide added safety
- Designed to work with the Q-Catch Chutes for solo operation
- Offside rubber bumper eliminates the gap after the chute, and keeps cattle flowing in a straight line
- Can be used with a Q-Catch Head Holder
- Can be attached to any sorting alley you prefer for added flexibility

Arrowquip has been creating best in class livestock equipment since 1988 through an extensive research and development process that is unmatched in the cattle industry. We employ the only team of engineers specifically dedicated to cattle handling, and are constantly improving our equipment to adhere the latest recommendations from key researchers and cattle handling experts.

Every piece of equipment we design is intended to make managing your cattle faster, easier, and safer every step of the way. Why does that matter?

Easier. Working cattle is hard enough. Why make it harder on yourself with equipment that is difficult to use and requires frustrating adjustments? Our equipment is designed with ease of use for the operator in mind, with ergonomic handles and far less adjustments, to make working your cattle easier than ever before. You don't need to be 6' tall to use our equipment, either!

Faster. Too many cattle handling systems are designed without consideration for natural cattle behavior, which results in stubborn cattle

that refuse to move effectively. Arrowquip equipment works with animal science to get cattle to move through the handling system without delays, thanks to unique features like our patented 3E System that uses light to draw cattle from tub to chute.

Safer. Good help is hard to find, and getting harder every day. When you're out in the field with your kids, your brother, or your wife, you need equipment you can trust every step of the way. There is no room for error. Our equipment is designed with safety for handlers and cattle in mind, and undergoes extensive testing to ensure the equipment is reliable for your ranch.

From chutes for cattle to custom cattle working systems and pens, Arrowquip has a solution for all your cattle handling needs. For added security, our equipment is backed by industry-leading warranty. Let our generations of ranching experience and knowledge of cattle behavior help you develop a more efficient and profitable operation today, tomorrow, and for years to come.
