WEIGHT: 222 lbs.

DIMENSIONS: 51" w x 80" h x 13" l

The Rolling Alley Gate is the most effective, efficient, and easy way to control the flow of cattle through your alley system. Featuring an off-side operation handle, top-mounted track, and ergonomically friendly design, the Rolling Alley Gate makes it easy for handlers to section off areas of their alley system. Arrowquip's Rolling Alley Gate is specifically designed to integrate with our full lineup of cattle chutes, alleys, and handling equipment, but can be used to improve flow through any system with the included panel pins and clips. Alley gates are an essential piece of equipment of any modular cattle handling system, why not choose one that makes controlling cattle flow easier on you?

SPECIFICATIONS

- Standard off-side operation handle
- Door can be operated from either side of your system
- Sound dampening guides keep distraction to a minimum
- Top hung running track eliminates the issue of build-up
- Features a safety latch to lock the door closed
- Rubber sound dampeners eliminate operating noise
- Can be operated from either side

PRODUCT WARRANTY

- Rolling Alley Gate - 5 YEARS

Products must be registered to claim warranty. Contact your Authorized Arrowquip Dealer for more information.

Arrowquip has been creating best in class livestock equipment since 1988 through an extensive research and development process that is unmatched in the cattle industry. We employ the only team of engineers specifically dedicated to cattle handling, and are constantly improving our equipment to adhere the latest recommendations from key researchers and cattle handling experts.

Every piece of equipment we design is intended to make managing your cattle faster, easier, and safer every step of the way. Why does that matter?

Easier. Working cattle is hard enough. Why make it harder on yourself with equipment that is difficult to use and requires frustrating adjustments? Our equipment is designed with ease of use for the operator in mind, with ergonomic handles and far less adjustments, to make working your cattle easier than ever before. You don't need to be 6' tall to use our equipment, either!

Faster. Too many cattle handling systems are designed without consideration for natural cattle behavior, which results in stubborn cattle

that refuse to move effectively. Arrowquip equipment works with animal science to get cattle to move through the handling system without delays, thanks to unique features like our patented 3E System that uses light to draw cattle from tub to chute.

Safer. Good help is hard to find, and getting harder every day. When you're out in the field with your kids, your brother, or your wife, you need equipment you can trust every step of the way. There is no room for error. Our equipment is designed with safety for handlers and cattle in mind, and undergoes extensive testing to ensure the equipment is reliable for your ranch.

From chutes for cattle to custom cattle working systems and pens, Arrowquip has a solution for all your cattle handling needs. For added security, our equipment is backed by industry-leading warranty. Let our generations of ranching experience and knowledge of cattle behavior help you develop a more efficient and profitable operation today, tomorrow, and for years to come.
